The Indo-Pacific humpback dolphins (*Sousa chinensis*) is widely distributed throughout the shallow, coastal of the Southern China Sea (Jefferson et al 2014)

Pink dolphin in Hongkong

Infant

Juvenile

Adults

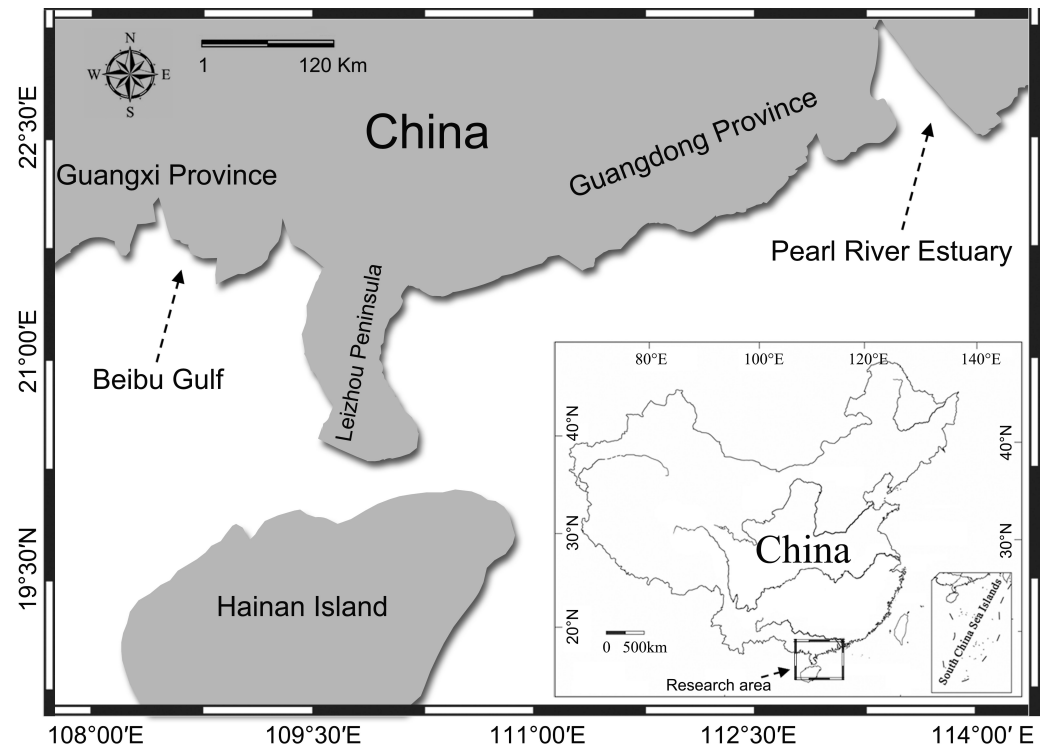

Old age

- ❖ Grade One National Key Protected Animal in China
- ❖ Protection of the animal and regulation of noise pollution is currently constrained by sparse data on the animal vocalization characteristics such as the whistle source level

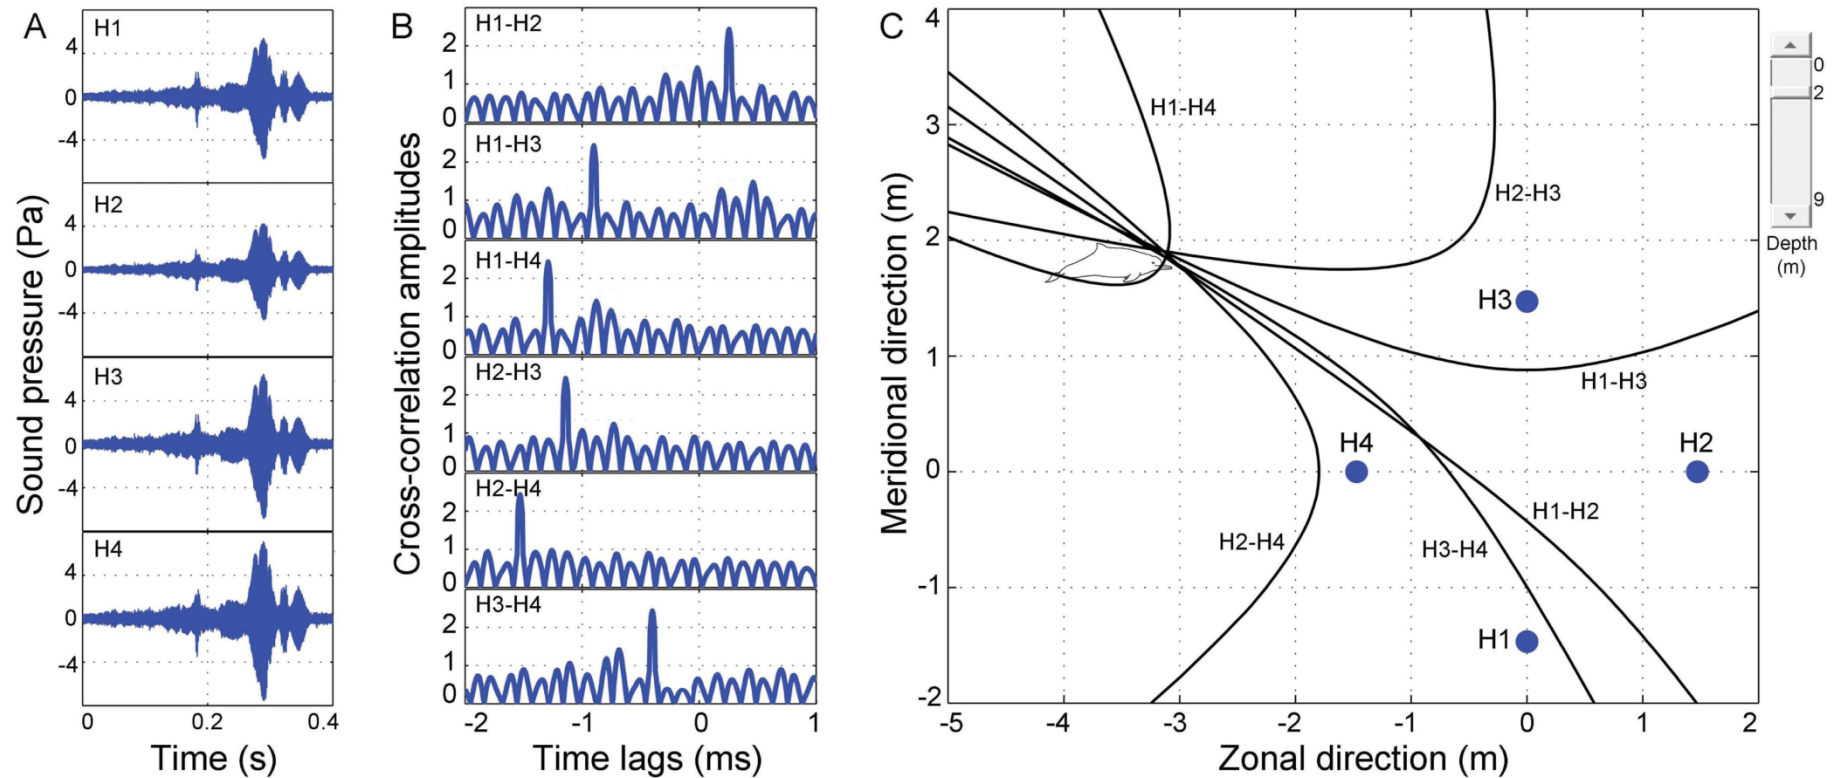

Map of the study area

Array design: Two-dimensional cross-shaped 5 hydrophone array

❖ Schematic of dolphin localization

**Waveform
cross correlation**

Hyperbola fixing

Shallow water sound propagation Multi-path propagation modelling

- ❖ **PRE : -17.3 ± 1.0 (mean \pm SD)**
- ❖ **range: from -20.5 to -15.5**
- ❖ **BG: -14.6 ± 0.8 (mean \pm SD)**
- ❖ **range: from -16.5 to -12.1**

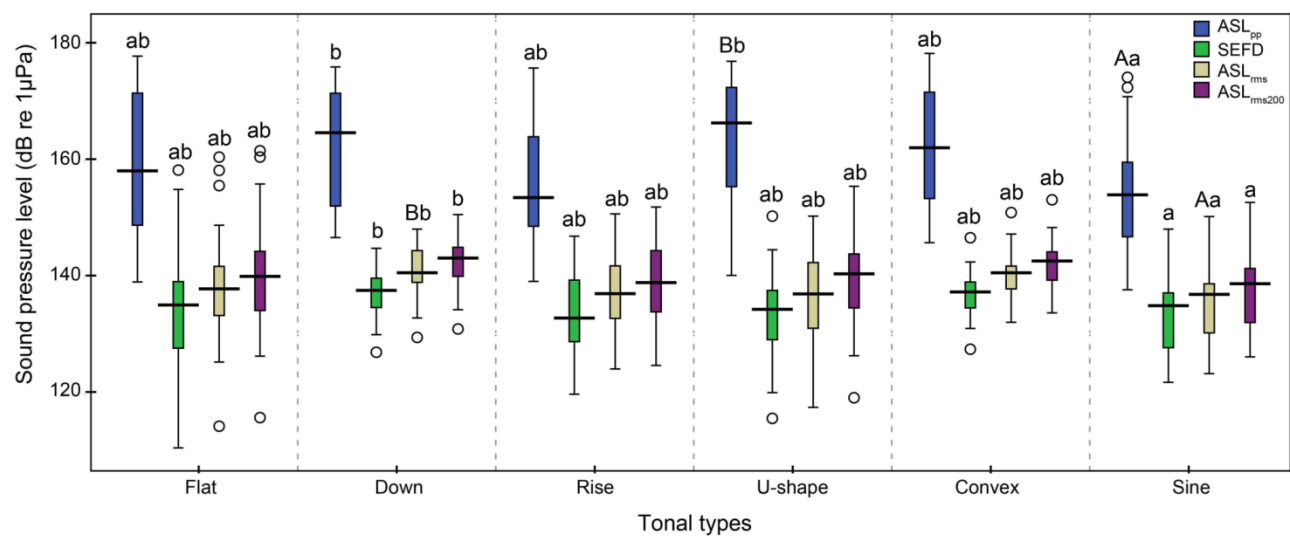

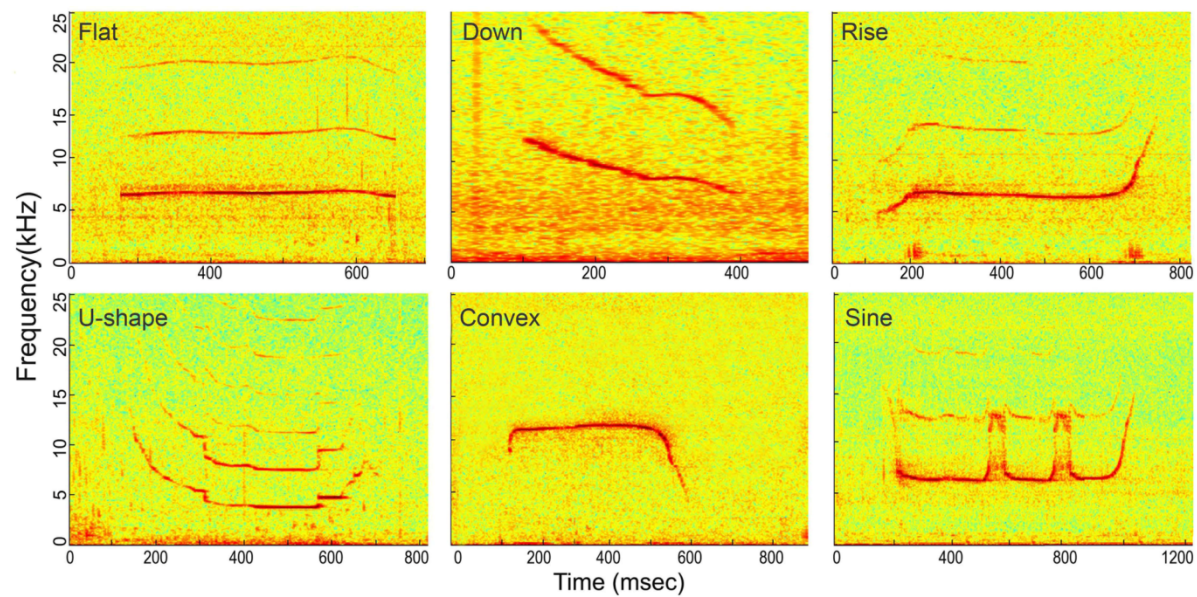

Results

	PRE(n=33)		BG(n=209)			
	mean±SD	Range	mean±SD	Range	z	p
ASL _{pp}	157.1±9.4	138.9-177.0	161.3±13.4	137.6-178.3	-1.1	0.26
ASL _{rms}	138.5±6.8	125.2-158.1	137.2±7.0	114.1-160.4	-0.8	0.42
ASL _{rms200}	140.3±7.3	126.3-160.4	139.3±6.9	115.6-161.4	-0.4	0.66
SEFD	135.2±7.4	120.7-154.8	134.0±6.8	110.4-158.1	-0.7	0.46

PRE: Pear-River Estuary; BG: Beibu Gulf

ASLs: apparent source levels; SEFD: source energy flux density

Application:

- (1) evaluating the appropriate noise exposure level for *Sousa*
- (2) expanding the application of passive acoustic monitoring strategy, such as in the scope of local population abundance estimation.
- (3) estimating active communication range
